# Tasks for User Evaluation

During the user evaluation, the participant will be guided through a series of tasks to interact with the beer-search-engine. The aim is to assess the system's usability and the user's experience within a three-minute timeframe.

## Task 1: Search for a Specific Beer

The user will initiate a search for a specific beer using the search bar. They are expected to find and select the beer named "Black Swan IPA India Pale Ale". This task evaluates the search functionality and ease of finding a specific item.

## Task 2: Add a Beer to Favorites

The user is tasked with classifying a beer of their choice as relevant. They should select any beer and add it to their favorites. This task evaluates the process of saving items for future reference.

## Task 3: Review Beer Details

For this task, the participant will review the details of a selected beer. They should choose any beer and explore its details, including alcohol content, description, and user reviews. This task assesses the accessibility and comprehensiveness of beer information.

## Task 4: Recompute Search results

The participant will have to recompute the results to take into account the given relevance feedbacks. This task assesses the effectiveness of the feedback relevance system.

## Task 5: Navigate Back to Homepage

The user will navigate back to the homepage from any beer details page. This task evaluates the ease of navigation and the intuitiveness of returning to the main interface.
